

PVC Pipe Wrap Tape

PVC Pipe Wrap Tape consists of a poly vinyl chloride that is coated in a film with a non-corrosive, pressure sensitive adhesive. PVC tape is specifically used to protect pipe surfaces from corrosion. It has superior moisture resistance and protects against corrosion. It can conform and is exceptionally adhesive to metal and plastic. This product is mainly used to protect valves, elbows and fittings. It provides outstanding protection against sunlight, acids, weather, and other such threats. PVC pipe wrap tape is also easily applied to by hand or machine through any weather condition.

PVC Pipe Wrap Tape

Physical Properties

Temperature Rating	80°C
Thickness	10 mil
Color	Black
Adhesion to Steel	20oz./in
Tensile Strength	20 lbs./in
Elongation	150%

How To Order

Item Number	Size	Thickness	Quantity/ Case
110	2x100	10 mil	24
110	4x100	10 mil	12
111	6x100	10 mil	6

The physical properties shown above are averages obtained from numerous studies and tests recommended by ASTM, governmental agencies, or by Step-Ko's tests. Certain rolls may differ slightly.
