## PipeMarker

The **PipeMarker** pipeline/utility markers, made of a non-metallic UV-stabilized High Density Polyethylene (HDPE) material, are used to make people aware that a pipeline, cable, or conduit is buried underneath. **PipeMarker**s show ownership of buried material and could *prevent or decrease* the chance of accidental damage. To ensure maximum cathodic protection, vents are used on the cross casing, *riding corrosion!* To install, simply bury the base in the ground and the anchor tube will prevent the marker from twisting. The **PipeMarker** can be seen from *any* angle, even straight up in the air and optional fluorescent fittings can more so increase visibility. The text on the fittings are hot stamped to prevent vandalism. **PipeMarker**s are maintenance free, promising a low-cost life after installation and its tubular design makes it resistant to “wind whip”.

## PipeMarker Observation Marker

The **PipeMarker** Observation Markers are made of a weather resistant aluminum frame that includes extra cross supports. These observation markers each come standard with up to four, 13” extra high vinyl numbers that comes with a *minimum of fifteen years* of outdoor life. The numbers can be customized to be extra reflective and can come in any color imaginable as well as the high gloss, clear coated background.

OBSERVATION MARKER  
NUMBER PLATES

DUAL LOOP MOUNTING  
SYSTEM

The **PipeMarker** Observation Marker is extra sturdy, consisting of a dual loop mounting system to prevent “wind whip”, twisting, and most of all, tampering. Everything is bolted using 18-8 Stainless Steel Bolts and Flange Lock Nuts which eliminates worries of broken welds in the field.

## The FlatMarker

The **FlatMarker** serves the same purpose as the **Pipe-Marker** but more eco-friendly. The **FlatMarker** is designed for low-key jobs and it'll install in no time using standard tools. These **FlatMarker**s come in red, yellow, white, and blue are made of UV-stabilized fiberglass making it completely resistant to all elements. The **FlatMarker** can come with or without the weather resistant, vinyl-made decals.

## Splice/Test Station

The dome is available in any color (white is standard).

Internal sleeve with nut attaches the dome using a bolt/washer set and connects using a standard can wrench.

Any pattern of terminals or holes are possible.

The support post is standard HDPE construction.

Unlike most test stations, our test stations look almost exact to our original **PipeMarkers**. This similarity feature was included into our design in order to further confuse vandals and the curious. To the untrained eye, it looks just like any other **PipeMarker**.
